**JUMO dTRON 304/308/316**

**Compact Controller with program function**

**Brief description**

The JUMO dTRON 300 series of controllers includes four freely programmable devices in different DIN formats for controlling temperature, pressure and other process variables. As a temperature controller (TR) according to EN 14597 the devices are used in heat-generating plants to control the temperature of liquids or gases (mode of action: 1B).

The high-contrast, multicolor LC display for process value, setpoint and operator prompting contains two four-digit 7-segment displays, two single-character 16-segment displays, display of the active setpoints, six switch position indicators, and displays for the dimensional unit, ramp function and manual operation.

Simple operation through 4 keys. The instruments can be used as 2-state, 3-state, modulating or continuous controllers. The controller software includes a program or ramp function, parameter set changeover, two autotuning (self-optimization) procedures, a math and logic module, as well as 4 limit comparators.

Linearizations for the usual transducers are stored, and a customer-specific linearization table can be programmed.

A setup program is available for user-friendly configuration from a PC. A serial interface for RS422/485 or Profibus-DP can be used to integrate the instruments into a data network.

The electrical connection is made at the back, via screw terminals.

The possible input and output configurations are shown in the following block diagram. The option boards are universally applicable for all instruments in the series.

**Block structure**

```
<table>
<thead>
<tr>
<th>Analog input</th>
<th>2 relays (changeover)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 logic inputs</td>
<td>2 logic outputs</td>
</tr>
</tbody>
</table>

Option 1

Option 2

Option 3
```

**Option boards:**
- Analog input
- 2 logic inputs
- 1 relay 230V/8A (changeover)
- 2 relays 230V/3A (make contact) with common pole
- 1 solid-state relay
- Analog output (voltage/current)
- RS422/485 interface
- PROFIBUS-DP interface

**Key features**

- Up to two programmable analog inputs
- Four programmable setpoints, two parameter sets
- Program function with 8 segments, or ramp function
- Math and logic module
- 4 limit comparators
- Two timers
- Two self-optimization procedures
- Fast, user-friendly configuration through the setup program with program editor
- RS422/485 interface or PROFIBUS-DP interface

**Approvals/marks of conformity** (see technical data)
Self-optimization

Standard features include the tried and tested self-optimization, which makes it possible for the controller to be matched to the control loop by a user who is not a control technology expert. This functions by evaluating the response of the control loop to specific changes in the manipulating variable. Either an oscillatory method or a step-response test can be selected. The step-response test is used, for example, in the plastics industry or in processes where the oscillatory method cannot be employed. The controller parameters that are calculated are: proportional band, reset time, derivative time, cycle time and filter time constant.

Customer-specific linearization

In addition to the linearizations for the usual transducers, a customer-specific linearization can also be created. The programming is carried out in the setup program, in the form of a table of values or a formula.

User data

Parameters which are frequently changed by the user can be combined at the operating level under "User data" (only through the setup program).

Math and logic module

Order details: Extra code 214
The math module makes it possible to combine values such as the setpoints, output levels and measurements from the analog inputs into a mathematical formula. The logic module can be used, for instance, to make a logical combination of logic inputs and limit comparator states. Up to two math or logic formulae can be entered through the setup program, and the results of the calculations can be presented at the outputs or used for internal purposes.

Special types of controller

Order details: Extra codes 217, 218 and 219
The instrument can be operated as a differential, humidity or ratio controller.

Logic functions

- Start/cancel self-optimization
- Change to manual mode
- Hold/cancel ramp
- Controller off
- Setpoint changeover
- Parameter set switching
- Key/level inhibit
- Text display
- Display off
- Acknowledge limit comparators
- Program start/hold/cancel
- Timer start/stop
The logic functions can be combined with one another (only through the setup program).

Functions of the outputs

- Analog input variables
- Math
- Process value
- Setpoint
- Ramp end value
- Control deviation
- Output level
- Controller outputs
- Limit comparators
- Control contacts
- Logic inputs
- Logic formula
- Program end
- Timer signals
- Program/automatic signal

Ramp function

Either a rising or a falling ramp function can be used (increase or decrease in the setpoint). The change in setpoint value SP at t0 is the final value for the ramp. The ramp starts with the setpoint at time t0. The slope of the ramp can be programmed; the sign (direction) of the slope is given by the relationship between the setpoint at time t0 and the SP value. When the supply voltage is switched on, the ramp function starts with the momentary process value.

Timers

Two timers are available for time-dependent control. The status of the timers can be switched through to the logic outputs or internally processed for the activation or deactivation of time-dependent processes.

Setup program (accessory)

The setup program for configuring the instrument is available in English, French and German. Using a PC, you can create and edit sets of data, and transfer them to the controller or read them out from the instrument. The data sets are stored and managed.

Program editor

For the easy creation of programs.

Startup function

To check the control-loop behavior.

Displays and controls

(1) 7-segment display (factory setting: process value)
four-digit, red; decimal place is configurable (automatic adjustment on display overflow)

(2) Active setpoint (factory setting: SP1)
SP1, SP2, SP3, SP4 (SP=setpoint); green;

(3) 7-segment display (factory setting: setpoint)
four-digit, green; decimal place is configurable,
also used for operator prompting (display of parameter and level symbols)

(4) Keys
yellow, for
- switch status of logic outputs 1—6 (display lights up = ON)
- ramp/program function is active
- active manual operation

(5) Indication
tyellow, for
- switch status of logic outputs 1—6 (display lights up = ON)
- ramp/program function is active
- active manual operation

(6) 16-segment display for the unit °C/°F and text
two-digit, green; with symbols for h, min, %
additional display options through the setup program
**Program function**

A setpoint profile can be implemented with a maximum of 8 program segments. The settings for the segment setpoints (SPP1 — SPP8) and segment times (tP1 — tP8) are carried out at the user level. The time scale can be configured as mm:ss or hh:mm (s = seconds, h = hours). A program-end signal can be generated, and the program can be halted or canceled. Further functions can be defined through the setup program (start at process value, cyclical program handling, segment-by-segment assignment of parameter sets and four control contacts). The program profile can also be visualized.

**Parameter level**

All the parameters and their meanings are included in the table. Some parameters may be missing or meaningless for a particular type of controller. Two parameter sets can be stored, to handle special applications.

</tbody>
</table>

**Interfaces**

**RS422/RS485 interface**

The serial interface is used for communication with higher-level (supervisory) systems. The Modbus protocol is used for transmission.

**PROFIBUS-DP**

The Profibus-DP interface can be used to integrate the controller into a fieldbus system operating according to the Profibus-DP standard. This Profibus version is especially designed for communication between automation systems and decentralized peripheral devices at the field level, and optimized for speed. Data transmission is made serially, using the RS485 standard. GSD generator, the project-planning tool that is supplied with the package (GSD = Gerätestammdaten, i.e. device data), is used to make a selection of device characteristics for the controller to create a standardized GSD file that is used to integrate the controller into the fieldbus system.

Sensor lead resistance: max. 30 Ω per lead for 3-wire or 4-wire circuit

Lead compensation: Not required for 3-wire or 4-wire circuit. With a 2-wire circuit, the lead resistance can be compensated in software by a correction of the process value.

² 1A with devices certified to DIN EN 14597

## Controller

| Controller type | 2-state controller (factory setting), 3-state controller, modulating controller, continuous controller  
| Controller structures | P, PD, PI, PID  
| A/D converter | dynamic resolution up to 16-bit  
| Sampling time | 50msec, 90msec, 150msec, 250msec (factory setting: 250msec)  

## Electrical data

| Supply voltage (switchmode PSU) | 110 — 240V AC -15/+10%; 48 — 63Hz  
|  | 20 — 30V AC/DC, 48 — 63Hz  
| Electrical safety | to EN 60730  
|  | overvoltage category III, pollution degree 2  
| Power consumption | Type 703041: max. 8VA; type 703042/43/44: max. 13VA  
| Data backup | EEPROM  
| Electrical connection | at the back, via screw terminals, 
|  | conductor cross-section up to 2.5mm² 
|  | with core ferrules (length: 10mm)  
| Electromagnetic compatibility | EN 61326-1  
| Interference emission | Class B  
| Interference immunity | to industrial requirements  

## Housing

| Housing type | plastic housing for panel mounting to IEC 61554  
| Depth behind panel | 90 mm  
| Ambient/storage temperature range | 0 to 55°C / -30 to +70°C  
| Climatic conditions | rel. humidity ≤90% annual mean, no condensation  
| Operating position | horizontal  
| Protection | to EN 60529, front IP65 / back IP20  
| Weight (fully fitted) | Type 703041: approx. 220g  
|  | Type 703042/43: approx. 380g  
|  | Type 703044: approx. 490g

For the calibration certificate the thermocouple type and the desired measuring points (calibration points) are to be defined.

Scope of delivery:
- 1 controller
- 1 seal
- mounting brackets
- 1 operating manual (format DIN A6)

A CD with demo setup software and PDF documents (operating manual and other documentation) can be ordered separately. Individual documents and programs can be downloaded at www.jumo.net (a charge is made for enabling the software).
