JUMO eTRON T100

Electronic Thermostat with optional PID two-state controller function for mounting on 35 mm DIN rail

Brief description

The electronic thermostat can be used as a heating or cooling thermostat or optionally as a PID two-point controller and records the process variables via resistance thermometer, thermocouple or current 0(4) to 20 mA. When used as a PID two-position controller, the controller structures P, I, PD, PI and PID are possible.

With the timer function, the thermostat function or the controller can be started or limited in time.

The switching status of the relay and digital outputs as well as the actual value and setpoint value are shown simultaneously in the display. It has a resolution of 64 × 80 pixels, has background lighting, and can be switched to the national languages German, English, French, and Spanish.

The device is operated via 4 keys on the front panel. The electrical connection is made via terminal blocks with push-in technology.

A PhotoMOS® relay for limit value monitoring or a digital input for connecting a potential-free contact are available as options.

A setup program is available as an accessory for simple configuration, parameterization, and reading out of the data logger.

Type 701052/...

Block diagram

Special features

- Two-point controller with self-optimization (extra code)
- Intuitive operation and configuration on the device or with the setup program through USB interface
- User level with 8 parameters
- Dot matrix display 64 x 80 pixels with 4 national languages
- Data logger function
- Service and operating hours counter
- Connection via terminal blocks with push-in technology
- 10 A relay (changeover contact)
- Customer-specific linearization in the setup program
- Limit value monitoring function
- Timer and ramp function
- Connection diagram retrievable in the LCD display

Approvals/approval marks (see "Technical data")

Controller

The following table shows the parameters of a parameter block in the case of an activated two-state controller (extra code). The transmission behavior is specified by the selection of the controller structure and determined by the configuration of the parameters for the proportional band (P component), derivative time (D component), and reset time (I component).

Parameter	Value range	Default setting	Unit	Meaning
Controller structure 1	P, I, PD, PI, PID	PID		Transmission behavior of the controller
Proportional band Xp1	0 to 9999	0	Physical unit of the controlled variable	Size of the proportional band The controller structure is not effective with $X_p = 0$ (behavior identical to limit value monitoring function).
Derivative time Tv1	0 to 9999	80	s	Influences the differential component of the controller output signal. The greater the derivative time, the more effect the differential component has.
Reset time Tn1	0 to 9999	350	s	Influences the integral component of the controller output signal. The greater the reset time, the less effect the integral component has.
Cycle time Cy1	0 to 9999	20	s	The cycle time should be chosen such that the energy supply to the process is as continuous as possible without overloading the switching elements.
Switching differential Xd1	0 to 999	1	Physical unit of the controlled variable	Hysteresis for proportional band $X_p = 0$
Working point Y0	-100 to +100	0	%	Working point correction for a P or PD controller (correction value for the output level). If the actual value has reached the setpoint value, the output level corresponds to the working point Y0.
Maximum Output value limit Y1	0 to 100	100	%	Maximum output value limit (only effective if $X_p > 0$)
Minimum Output value limit Y2	0 to 100	0	%	Minimum output value limit (only effective if $X_p > 0$)
Minimum relay switch-on duration Tk1	0 to 9999	0	s	Limitation of the switching frequency

Technical data

Analog input

The following measurement input variants can be ordered.

Measurement input group 1 (RTD temperature probe)

Designation	Standard	Measuring range	Measuring accuracy ^a	Ambient temperature influence	ITS
Pt100, Pt1000 in 2/3-wire circuit	IEC 60751:2008	-200 to +600 °C	≤ 0.25 %	≤ 0.1×10 ⁻³ 1/K	90
KTY 2X-6 in 2-wire circuit		-50 to +150 °C	≤ 1 %	≤ 0.1×10 ⁻³ 1/K	-
Customer table		150 Ω to 3000 Ω	≤ 0.25 %	≤ 0.1×10 ⁻³ 1/K	-
Measuring current	Approx. 0.5 mA				
Sensor line resistance	≤ 30 Ω per line for 2 and 3-wire circuit				
Lead compensation	Not required for 3-wire circuit. In 2-wire circuits, lead compensation is performed in the software by entering a fixed line resistance.				
Special features	Can also be programmed in °F				

^a The accuracy specifications refer to the maximum measuring range. Smaller measuring spans lead to reduced linearization accuracy.

Measurement input group 2 (thermocouple)

Designation	Standard	Measuring range	Measuring accuracy ^a	Ambient temperature influence ^b	ITS
Fe-CuNi "L"	DIN 43710:1985-12	-200 to +900 °C	±0.4 %	≤ 0.3×10 ⁻³ 1/K	68
Fe-CuNi "J"	DIN EN 60584-1:2014	-210 to +1200 °C	±0.4 % from -100 °C	≤ 0.3×10 ⁻³ 1/K	90
NiCr-Ni "K"	DIN EN 60584-1:2014	-270 to +1300 °C	±0.4 % from -80 °C	≤ 0.3×10 ⁻³ 1/K	90
Customer table		-15 to 75 mV	±0.4 %	≤ 0.3×10 ⁻³ 1/K	
Measuring range start/end	Freely programmable within the limits in steps of 0.1 K				
Cold junction	Internal temperature measurement or external constant 0 °C				
Cold junction accuracy (internal)	±1 K				
Special features	Can also be programmed in °F				

^a The accuracy specifications refer to the maximum measuring range. Smaller measuring spans lead to reduced linearization accuracy.

^b The ambient temperature influence can be guaranteed in the range from -20 to +55 °C.

Measurement input group 3 (standard signal)

Designation	Measuring range	Measuring accuracy ^a	Ambient temperature influence
Current (voltage drop ≤ 2.5 V), freely scalable	0 to 20 mA 4 to 20 mA	≤ 0.125 %	≤ 0.1×10 ⁻³ 1/K deviation from 22 °C
Customer table	0 to 20 mA	≤ 0.125 %	
Special features	Scaling adjustable		

^a The accuracy specifications refer to the maximum measuring range. Smaller measuring spans lead to reduced linearization accuracy.

Measurement input group 4 (NTC railway)

Designation	Measuring range	Measuring accuracy	Ambient temperature influence
NTC resistance (5 kΩ at 25 °C) for railway applications	-55 to +150 °C		Deviation from 22 °C in the following ranges: -55 °C to 100 °C: $\leq 0.1 \times 10^{-3} \text{ 1/K}$ 100 °C to 130 °C: $\leq 0.2 \times 10^{-3} \text{ 1/K}$ 130 °C to 150 °C: $\leq 0.45 \times 10^{-3} \text{ 1/K}$

Customer table	400 Ω to 40 kΩ	$\leq 0.15 \%$	$\leq 0.1 \times 10^{-3} \text{ 1/K}$
Connection type	2-wire circuit		
Measuring current	Approx. 0.1 mA		

Measurement input group 5

Designation		Measuring range	Measuring accuracy ^a	Ambient temperature influence	ITS
Ni 1000	DIN 43760:1987-09	-60 to +250 °C	$\leq 0.25 \%$	$\leq 0.1 \times 10^{-3} \text{ 1/K}$ deviation from 22 °C	68
LG-Ni 1000	Landis & Gyr TK5000 (Siemens HVAC)	-60 to +250 °C	$\leq 0.25 \%$	$\leq 0.1 \times 10^{-3} \text{ 1/K}$ deviation from 22 °C	
Customer table		150 Ω to 3000 Ω	$\leq 0.25 \%$		
Sensor line resistance	$\leq 30 \Omega$ per line				
Connection type	2-wire circuit				
Special features	Can also be programmed in °F				

^a The accuracy specifications refer to the maximum measuring range. Smaller measuring spans lead to reduced linearization accuracy.

Measuring circuit monitoring

In the event of a malfunction, the outputs move to a defined (configurable) status.

Measuring probe	Probe/cable break	Probe/cable short circuit
RTD temperature probe	Is detected	Is detected
KTY 2X-6	Is detected	Is detected
Thermocouple (single)	Is detected	Is not detected
Current		
4 to 20 mA	Is detected	Is detected
0 to 20 mA	Is not detected	Is not detected
NTC railway applications	Is detected	Is detected
Ni 1000, LG-Ni 1000	Is detected	Is detected

Digital input and digital output

Designation	Function
Potential-free contact (option) or PhotoMOS® relay (option)	For connection to a commercial switch or contact Switch-on resistance < 1 kΩ, switch-off resistance > 50 kΩ, max. DC 45 V, 200 mA, max. AC 30 V, 200 mA
Relay output	Relay (changeover contact) AC 250 V, 10 A (resistive load) 150000 switching operations at rated load

Display

Type, resolution	Dot matrix LCD display with 64 × 80 pixels
Settings	Contrast, brightness, and backlight function

Housing

Site altitude	Max. 2000 m above sea level
Case type, material	Plastic case, polycarbonate according to DIN EN 45545 (halogen-free, only for indoor use)
Flammability class	UL94 V0
Electrical connection	Via terminal blocks with push-in technology
Mounting on	Mounting rail 35 mm × 7.5 mm according to DIN IEC 60715
Close mounting	Permitted
Installation position	Vertical
Protection type	IP20 according to DIN EN 60529
Weight	Approx. 110 g

Electrical data

Voltage supply	AC 230 V, +10/-15 %, 48 to 63 Hz or AC 115 V, +10/-15 %, 48 to 63 Hz or DC 12 to 24 V +15/-15 % ^a / AC 24 V +15/-15 %, 48 to 63 Hz (The device has only to be connected at SELV- or PELV-circuits)
Power consumption	With voltage supply 230 V: max. 1.5 W, 2.0 VA With voltage supply 115 V: max. 1.5 W, 2.0 VA With voltage supply DC 12 to 24 V: max. 1.2 W With voltage supply AC 24 V +15/-15 %: max. 0.8 W, 1.8 VA
Inputs and outputs Conductor cross section	Max. 2.5 mm ² , wire or strand with ferrule
Electrical safety	According to DIN EN 61010-1:2020 Overvoltage category III, pollution degree 2
Analog inputs	Connection only to SELV (secondary circuits)
Sampling rate	250 ms
Input filter	Digital filter, 2nd order; filter time constant can be adjusted from 0 to 100.0 s
Accuracy of timer and operating hours counter	1%

^a For railway applications (Extra code 950) only a mains supply voltage of DC 24V +15/-15% is approved.

Environmental influences

Operating, storage temperature range	-40 to +55 °C (display to min. -10 °C), -40 to +70 °C
Resistance to climatic conditions	≤ 85% relative humidity, annual average, no condensation
Electromagnetic compatibility Interference emission Interference immunity	According to DIN EN 61326-1: 2022, DIN EN 50121-1: 2017/ 50121-3-2: 2017 Class B ^a Industrial requirement

^a The product is suitable for industrial use as well as for households and small businesses.

Connection elements

(L1, N, L+, L-)	Voltage supply (according to nameplate)	(3, 4)	Digital input or PhotoMOS® relay (option according to nameplate)
(1, 2, 3)	Actual value of analog input	(5, 6, 7)	Relay output

Connection diagram

The connection diagram in the data sheet provides preliminary information about the connection options. For the electrical connection, only use the installation instructions or the operating manual. The knowledge and the correct technical execution of the safety information and warnings contained in these documents are mandatory for installation, electrical connection, startup, and for safety during operation.

Actual value of analog input

Connection	Connection terminal	Symbol and terminal designation
Thermocouple	(1, 2)	
- RTD temperature probe Pt100 / Pt1000 - KTY 2X-6 - NTC railway - Ni1000 - LG-Ni 1000 in 2-wire circuit	(1, 2)	
RTD temperature probe Pt100 / Pt1000 in 3-wire circuit	(1, 2, 3)	
Current DC 0(4) to 20 mA	(1, 2)	

Digital input or output PhotoMOS® relay K2 (option)

Connection	Connection terminal	Symbol and terminal designation
Note: If the PhotoMOS® relay or digital input option is selected, a Pt100 / Pt1000 RTD temperature probe cannot be connected in a 3-wire circuit.	(3, 4)	

Digital output relay K1

Connection	Connection terminal	Symbol and terminal designation
Relay, changeover contact (zero-current state)	(5, 6, 7)

Order details

(1) Basic type	
701052	eTRON T100 for mounting on DIN rail (1 relay output changeover contact 10A)
(2) Version	
8	Standard with default settings
9	Customer-specific configuration (specifications in plain text)
(3) Input^b	
01	RTD temperature probes Pt100, Pt1000, KTY2X-6
02	Thermocouple
03	0(4) to 20 mA
04	NTC (5 kΩ at 25 °C) for railway applications
05	Ni1000 DIN 43760, Ni1000 Landis & Gyr TK 5000 for railway applications
(4) Voltage supply (operating conditions according to DIN EN 50121)	
02	AC 230 V, +10/-15 %, 48 to 63 Hz
05	AC 115 V, +10/-15 % ^a , 48 to 63 Hz
31	DC 12 to 24 V +15/-15 % / AC 24 V +15/-15 %, 48 to 63 Hz (The device has only to be connected at SELV- or PELV-circuits)
(5) Options	
00	None (connection of Pt100 / Pt1000 RTD temperature probes in three-wire circuit is possible)
01	Digital output PhotoMOS® relay (connection of a three-wire circuit is not possible)
02	Digital input for potential-free contact (connection of a three-wire circuit is not possible)
(6) Extra codes	
033	PID two-state controller function
950	Suitable for railway applications according to DIN EN 50155 ^a , the declaration of manufacturer is available in the Internet under http://www.jumo.de

^a For railway applications (Extra code 950) only a mains supply voltage of DC 24V +15/-15% is approved.

^b Measuring input groups cannot be switched between each other

Order code (1) (2) - (3) (4) (5) (6)
 Order example 701052 / 8 - 01 - 02 - 00 / 950 , ...

Scope of delivery

- JUMO eTRON T100 in the ordered version
- 1 operating manual (leaflet)

General accessories

Item	Part no.
Setup program on CD-ROM, multilingual	00702233
USB cable A-connector to Micro-B connector, length 3 m, for type 701052	00616250
Screw-on end clamp for mounting rail	00528648
Activation for PID two-state controller (setup program required)	30058739
